KeyMACRO is a music keyboard that turns your ordinary computer keyboard into an all-purpose music keyboard. Thanks to its set of "recipes", you can compose your favorite tunes while typing in the same way you used to play them on an acoustic piano. KeyMACRO is an affordable solution to the issue that every music loving musician has faced at some point in his or her career: how to play music on a computer keyboard. KeyMACRO is a lightweight application designed to work only with Microsoft Windows and includes support for songs with the following: The CPU-friendly songs are programmed with drag-and-drop functions. For example, you can drag-and-drop a 3-note chord into a song's pre-programmed chord box. Then, all you need to do is to drag-and-drop another chord box on top of the first. And, if you want to create a new chord, just drag-and-drop another chord box to the song. You can also create your own MIDI/recipes using the so-called "recipes" feature. For example, if you want to create a new song, just drag a musical note onto the song's grid and you will get a 5-note chord automatically. You can use the program's graphical interface to quickly perform song editing and/or creation. Note that KeyMACRO is built on top of a GUI framework that will let you design your own interface in future versions. KeyMACRO can export its songs as MIDI files. You can then edit and process those MIDI files in a variety of applications. User-friendly instrument setups let you quickly adjust the instrument's scale to a specific song's key. You can use any MIDI file and then save the settings to a new preset. You can set KeyMACRO's settings at a global level or for each song or chord. To do so, drag-and-drop the song into a specific menu. KEYMACRO can export song metadata as JSON, XLS and TXT files, or as MIDI. KeyMACRO lets you program the automatic retrieval of metadata, so the lyrics can be automatically displayed in any music program. KeyMACRO is available in both free and commercial editions.
