What Is Photoshop? Photoshop is both a software program and a collection of Adobe Photoshop family image-editing tools that lets you edit bitmap images (including GIFs) in a layer-based editing system that supports transparency. You can create new layers by selecting the Layers icon, and you can combine multiple layers into a new composite layer by selecting "Merge Visible Layers."

Adobe Photoshop CS2/CS3/CS4/CS5/CS6/CS7/CS5.5/CS6.5/CS7.1/CS8 is available for both Mac and Windows. The most recent version is CS8, which was released October 30, 2012. Photoshop has been a staple of the graphic design industry since its inception. Photoshop is an industry standard and is popular because it is one of the only

professional image editing programs available and has the most features. Photoshop

Features

Here are some of the features that you can use with Photoshop: Multiple Layers

You can create a new layer, which is like a sheet of paper with a different background color or grayscale, and make edits to images using the new layer. After you save your edit, the new layer is displayed on top of the old one. You can make as many layers as you want and then combine them using the "Merge Visible Layers" icon. That way, you can edit the layer with something like a color fill, and then undo that action and edit the layer with a line tool. You can change the visibility of the layer again and keep on editing and merging. The layers contain a series of one-bit images that can contain transparency. You can create as many layers

as you want and lay them out by moving them around the screen. Multiple Bitmaps on a Layer You can create a new bitmap image of a particular portion of your original layer, and you can use this like an object on a single layer. You can make as many of these new objects on the original layer as you want, and you can combine them by using "Merge Visible Layers" to create a new composite layer. Each of the individual objects can be colored and blended, or even be made transparent. Undo/Redo You can undo any changes you make in Photoshop to any layer, even after you have merged the visibility of the layers. You can also

Artist Karolyn Ann Quay will perform five free concerts in the Silver Spring Library this summer. The sets of this trio of concerts – presenting music from the late 1950s through the early 1960s – are cross-listed from the Jazz Series at the Black Hills Institute for the Performing Arts. Quay, a Grammy winner, is the jazz, folk and Americana vocalist known for her rich alto voice, a sense of improvisation and a knack for creating her own song-like compositions. We’re not giving away any secrets about the concerts’ names, but the first takes place July 17 at 9:30 p.m. Quay will perform “He’s My Guy” and “I Know the Truth” from a small-group music from the late 1950s. July 24 and Aug. 21 at 2 p.m. Quay will perform “We All Fall In Love

at the Rumrunners Dance” from Frank Loesser’s 1957 musical “Guys and Dolls.” That show had a brief run at the Ford’s Theatre on Broadway and then enjoyed a revival in London and on PBS’s “Singing in the Rain.” “Enjoy You” is the title of Quay’s Sept. 11 show with the trio of music composed by Hank Locklin. It’s from the 1958 series of albums produced by the Capitol Records label, which included such famous songs as “La Bamba,” “Lucky Lips” and “I’ll Fly Away.” And finally, Aug. 25 at 7 p.m. Quay will perform “At the Rumrunners Dance” from the musical “Nightclub” (written by Stephen Margolis, Alex Weisman and others), which is remembered for featuring the young Barbra Streisand. We’re not revealing the names of the other acts that will accompany Quay on the concerts, but

they are in addition to those that can be seen on the Jazz Series. We're expecting a strong lineup that can be seen on the Facebook page. A similar trio series was launched in the spring by the Black Hills Institute. You can see the first four concerts by clicking here. – 30 – Now we are very proud to announce that the new W

The study, published today in Science Translational Medicine, followed 30 patients, with lung cancer and brain tumors,

through the first stage of treatment. Overall, the researchers achieved a 78 percent tumor response rate among all patients—compared with 42 percent for those who received only carboplatin, and 62 percent for those who received radiation alone. The next stage is to know whether the treatment works, Dr. David Karn, the principal investigator, said in a release. Participants in the study received carboplatin prior to radiation therapy, and at a dose of 400 milligrams or 600 milligrams per day. Only half the participants received the standard dose of radiation, and in some cases, that was too much. Those who got the lower dose had more severe side effects—including vomiting and paralysis. But that does not mean that the high doses of carboplatin are better, according to researchers. “This is the first study to

compare the benefits and risks of using carboplatin with the standard of care in treating brain metastases,” Karn said. “We found that the higher dose was better tolerated, but the results were disappointing because neither combination was significantly better than the other.” Effects of temperature and breed on development and expression of diapause in the three-spined stickleback (*Gasterosteus aculeatus*).

Diapause is generally considered to be a complex trait with high heritability (h^2), and genetic variation for diapause has often been found in laboratory crosses of diapause and nondiapause stocks. In nature, many diapausing stocks have been found to be cryptic, and thus far the genetic variation in diapause has not been identified. In this paper, we asked: (1) What are the effects of

temperature on diapause? (2) Are there effects of hatch, age, or size at hatching on diapause? and (3) Is there genetic variation for diapause at any given temperature? The three-spined stickleback (*Gasterosteus aculeatus*) is a freshwater fish species with a complex life cycle. Lar
