What's new in Super Bugman Extreme Ultra:

line Superstorm Melon (also known as Nor'easter "Melon") was a nor'easter that struck the Mid-Atlantic United States and New England in early October 2014. In the Atlantic Ocean, the storm was considered one of the most intense tropical cyclones ever observed. In the United States, coastal areas from the New England/Atlantic seaboard region to the Midwest reported significant damage, including significant flooding. Associated tornadoes affected the Baltimore metropolitan area as well as portions of West Virginia and Delaware. In the U.S. Virgin Islands at least nine people died and more than US\$500 million in damage was caused by the storm. The storm was also the deadliest Hurricane Nor'easter in the United States since 1972. As the storm approached, forecasters anticipated that it would strike the U.S. Coastal Zone as an extratropical cyclone during the morning hours of October 5; however, the best forecast of the system at the time was of it remaining a mature, tropical cyclone as it crossed the North Atlantic Ocean. The storm, which had steadily intensified since it developed around October 2 in the eastern Atlantic Ocean, strengthened into a potent Category 3 on the Saffir-Simpson Hurricane Scale on October 3. As it headed north-northwest around the North Atlantic, it began to interact with a frontal system, allowing forecasters to anticipate a turn toward northeast into the Northeast United States; a rare tip of the fairway turnaround would take place. Its slowly weakening wind structure, along with land interaction, caused a significant drop in strength as it approached the United States in the early hours of October 6. As it neared the United States, forecasters changed their best forecast of land interaction away from the coast to the mid-levels of the storm. Due to this change, the storm's center was expected to make

landfall near Cape Vincent, New York, as a high impact nor'easter, with an estimated 1,500 millions of dollars in damage to New York City alone. All day on October 6, the storm's maximum sustained winds shifted and weakened, preventing New York City's Mayor Michael Bloomberg from proclaiming a state of emergency; however, the nor'easter's strength off the East Coast and the determination to make landfall there kept the storm labeled "potentially catastrophic". The storm began to intensify over New York City as it approached landfall; reaching Category 2 status two hours before landfall, it
