However, if your needs are more basic, there are good reasons to consider a less powerful version of Photoshop. Here's how to choose the best free Photoshop alternatives available today. Pixlr. Photo editing is, at its most basic, just about layering your images together and changing its color and contrast until it looks like what you want. Pixlr is a free tool that does just that. But we think you get enough of Pixlr for free; photo-editing and doodling are what Pixlr is all about. Pixlr allows you to edit your photos at its various professional levels. It can save your images in PNG format, but there's no saving of files in layers (all work is done on one single image), so Pixlr really is no Photoshop replacement. Pixlr offers Free and Plus ($1.99 USD) versions of the app. It's well worth trying out both (even if only to get a sense of what the Plus features are, as many of them are quite nice). pH-controlled photonic behavior of single carbon nanotubes. We demonstrate that a single-wall carbon nanotube (SWNT) exhibits a change in its photonic behavior as a function of its chemical environment. By employing a fluorescence microscope, we measured the photonic behavior of a SWNT attached to a silicon nitride surface as the surface of the SWNT is wetted by water and a solution of a pH-sensitive dye. We further used an atomic force microscope to measure the interaction between a charged dye molecule and the SWNT surface. The results show a change in the photonic behavior of the SWNT as the surface of the SWNT is wetted by the water. We further demonstrated that by controlling the pH of the aqueous solution, we can change the response of the SWNT fluorescence to that of the charged dye molecule.The Health Department in Uruguay is celebrating the recent withdrawal of four local brands of erectile dysfunction medication — and a 2,500% rise in hospital visits. The government said a nationwide educational campaign in 2011 resulted in people no longer thinking their erections were caused by taking their Viagra or Cialis and thus seeking medical help. Just two years on, the department was still receiving scores of calls, so it implemented a new strategy, which has seen emergency room visits increase by 2,500% to 300-400 a month. The campaign centers on an educational film, the news release said. "Understand the concept of 'normal' sexual health and practice it," the video says. Uruguay's Health Minister, Eliseo Soto, said that such campaigns were not common practice in other countries — which he called "absurd." In the U.S., between 10% and 20% of men suffer from erectile dysfunction. But only 5% seek medical help, the American Urological Association states, most of whom are referred to the doctor for a prescription of Viagra. Some 24 million U.S. men — "almost half" — have been diagnosed with the condition, and "hundreds of millions" of the drugs, the society added. In South Africa, a "Wisdom to Love" campaign has seen similar gains. In 2016, 91% of men felt they had a normal sex life, according to a news release. Meanwhile, "immediate tactics" have seen the number of hospital visits drop to an average of 19 a month — less
